Generally speaking, a gemstone is a stone that is beautiful, rare, and durable resistant to abrasion, fracturing and chemical reactions. It resembles a cabochon, a gemstone that has not been faceted but has been polished.

It was long ago discovered that heating citrine, amethyst or other quartz would. The majority of the known stones are translucent, but the most rare, and therefore most valuable, example ever found was transparent. Apache Gold semi precious gemstone cabochons take a high polish. No other gemstone can produce such a wide range of iridescent colors in a single stone.

It was once thought to be a gift from heaven that would fall in flashes of light. In the 18th century, the mines in India were nearly depleted, and new diamond mines were discovered first in Brazil, and later in South Africa.
