Request Appointment. The navicular bone is found in front of the heel bone, and the cuneiform and cuboid bones are arranged in front of the navicular bone.

It functions as a shock absorber, and also supports the arch of the foot. As the feet bear the entire weight of the body and are involved in most activities, they are more prone to problems such as calluses, corns, cracks, infections and traumatic injuries. Treatment for these conditions may include orthotics, braces, physical therapy, injections or surgery.

Total recovery time varies from patient to patient. Click on the topics below
Ankle sprain is a common injury that occurs when you suddenly fall or twist the joint or when you land your foot in an awkward position after a jump. Ice should be applied over a towel on the affected area for minutes, four times a day, for

several days.
